

CLEANING

## CLEANING GUIDE

Hygiene has never been more important in today's food industry. So it's absolutely crucial to ensure that every aspect of your operation is perfectly clean. All food service areas are best cleaned using appropriate products, ensuring that you deliver food that is both of the highest quality and safety. Only the cleanest food preparation areas guarantee food safety, and with Bunzl Catering Supplies' range of cleaning products for kitchens, floors, carpets, bathrooms, glass and laminates, wood, brass, and silver, cleanliness can be assured. That is why Bunzl Catering Supplies has developed a range of products from the sturdiest mops and buckets to sponges and scourers. A full range of products to meet your HACCP requirements.

### Choosing the Correct Brush

Brushes and cleaning tools have to be very specialised in order to meet all the unique requirements of the food service industry. Selecting the correct bristle is very important. Longer bristles offer greater flexibility when compared to a shorter trim. The key to efficiency is maximum bristle tip contact to the surface and the proper type of bristle for the surface to be cleaned or prepped. Proper selection is extremely important for making the cleaning and prepping process as easy and efficient as possible. As health department standards continue to increase, brushes and cleaning tools will play an increasingly important role in meeting regulations and reducing maintenance costs. The correct brush or tool designed for the proper job will ensure greater efficiency and reduce health risks in the food service environment.

### The Right Bristle for the Job

**Nylon** Offers excellent abrasion resistance, shear/break strength and bristle bend recovery. Very good chemical resistance and sustains temperatures up to 121°C. Best for abrasive, and rough uses.

**Polyester** Excellent chemical resistance ultra violet light resistance and bristle bend recovery. Polyester has very good abrasion resistance and is ideal for all round use and for extreme exposure to cleaning chemicals.

**Polypropylene** Excellent chemical resistance to acids, oils, fungus and bacteria growth. Polypropylene is best choice as an economical synthetic food service alternative to natural fibres.

**Polystyrene** has excellent bristle bend recovery and tear/break strength. Ideal for floor sweeps and brooms.

**Teflon** Excellent heat and abrasion resistance and is ideal for high heat uses.

**Stainless Steel Wire** Rust-proof, excellent chemical resistance. Best choice for aggressive cleaning of grills and other heavily soiled food service equipment.

**Boar Bristle** Bleached and sterilised bristles can withstand temperatures up to 260°C and is great for high heat basting.

**Bassine Fibre** Natural stiff and coarse fibres from India palms is a classic choice for heavy floor cleaning.

**Bass Fibre** Natural African bass fibre is coarse, stiff and provides good flexibility for use in upright floor sweeps and as a blend with other fibres for other applications.

**KWIKMASTER**

We have an exciting range of new, cost effective Kwikmaster chemical products and cleaning program. As part of our continual product development and nationwide sourcing capacities, we are now able to offer competitively priced chemical products with comprehensive service packages.

Our objective is to provide substantial cost savings across all chemical programs and a personalised service arrangement that will assist you in maximising economy, performance and safety across all venues. We are confident that this new program will not only meet but exceed your expectations.

The Kwikmaster Chemical Program includes:

- Site survey for accurate product recommendation
- Installation of chemical dispensing units (if applicable)
- Approved spray and application bottle with labelling detailing necessary safety information
- Staff training and chemical induction program
- Supply of cleaning procedures manual with relevant MSDS
- Development of wall charts upon finalisation of product listing

All products when used to the required dilution rate have very minimal risk of affecting the environment in any way. All products are manufactured in line with all State environmental and health and safety requirements. However, for disposal of undiluted or bulk product please refer to your local State legislations.

Our recommended product range has been selected with a view to ensuring:

- A minimal number of Hazardous Products
- An emphasis on multi-purpose products to reduce stock holdings and facilitate ease of training
- Compatibility with dispensing systems.

Talk to your local BCS Representative for more details.

**Kwikmaster Auto Dish Liquid**
