Volume 1

SUPPLYING MARKET LEADING BRANDS

The Group purchasing function proactively coordinates our procurement and international sourcing, and shares information seamlessly among the business areas.

Our global sourcing policy has two aspects: working with our preferred suppliers who are typically international manufacturers of market leading brands, and coordinating the sourcing of own brand and alternative quality products from low cost economies, which together ensure that our customers have access to the best products that meet their needs.

We have also taken a positive approach to sourcing environmentally friendly products and expect this area to develop further in the future.
